

Retail Physical Inventory Equipment

Poncesolutions.com

Why are we saying “Retail Inventory Equipment” instead of Retail Inventory App?

Because we are providing a system that can replace your existing equipment.

At the center of it is the iOS® or Android® app that we have created but you can attach a Bluetooth scanner and USB keypad. With that, now you have mobile device to conduct your inventory.

Meet the equipment

The Bluetooth scanner is required to conduct efficient inventory. The USB keypad is optional but again efficiency increase dramatically by its use.

How does it work?

The iOS® and Android® apps will be made available for free on their respective App Store.

The app comes pre-loaded with a sample item master and a sample inventory.

You will have the opportunity to check its functionality with some limitations.

- The app will not be able to communicate directly with your own web server.

- The app will not export more than 50 items.

To remove the limitation, you will purchase a token from our <https://www.poncesolutions.com>

What are the app capabilities?

- An item master can be loaded. 30k items were loaded during testing.
- Using the Bluetooth, it scans barcode items and validates them against the item master, if available.
- Optionally can accept input from a USB keypad
- Allows areas and sections to organize and track inventoried locations.
- The full inventory data is available in a searchable list.
- Shows items that were not found in the item master in a simple view so that you can quickly find them in a location.
- Alert user of unexpected events, visually and sound.
- Export data as CSV, JSON, and Fixed text format.
- The files can be used with the device “share” functionality.
- Export JSON data directly to a web server.

How much does it cost?

As introductory price, we will have the app at \$100.00, but to make it available to a greater number of users, we will have a 50% discount available for a few months.

Can I load the app in multiple devices?

We are providing an extremely low price on the app when it is compared to the cost you would incur for the purchasing of another mobile inventory device. Because of that you will need to purchase a token for each device in which the app will be installed with its full functionality.

Can I load the app multiple times on the same device?

Sure. If for some reason your app is misbehaving or the device is misbehaving, you will be able to apply the token that has been created for that device. The token will not transfer to a new device.

Is there a support for the app?

As with any app, basic support is available. You will need to contact us if the app is not working as described.

If you want additional features, you can also contact us and we will make the decision whether the feature will be helpful to the rest of the users.

Can the app be purchased as site license?

Please contact us and we can discuss it.

How to use multiple devices on store/location?

We will provide the software information to install your own web server on a computer. You can have as many devices as you need connected thru a local Wi-Fi. Each device will be able to transfer its data to the computer.

The server will have basic reports that can be enhanced by you or us

A dark blue arrow points to the right from the left edge of the slide. Below it, several thin, curved lines in shades of blue and grey sweep across the left side of the page.

Where can I get more information?

You can visit <https://www.poncesolutions.com>

You can visit <https://rinv.poncesolutions.com>.

There you will find help for each of the screens on the app. Soon we will post a video of the app in action.

You can email gilberto@poncesolutions.com with any questions you may have. We will try to respond in a timely manner.
